

SUPER CPAP BATTERY PACKS

FREQUENTLY ASKED QUESTIONS

Is a prescription required for the CPAP Battery Pack? No.

Do insurance companies pay for the CPAP Battery Pack? CPAP Battery Packs are not considered a medically necessary item and therefore will most likely not be covered by insurance.

Do CPAP Battery Packs work with all CPAP/BiLevel machine models? Yes. CPAP Battery Packs are compatible with most makes and models of CPAP and BiLevel machines.

When is a sine wave inverter or DC converter required? The use of a sine wave inverter or DC converter is required for ResMed model machines, if the machine does not have a DC input port, and when charging the Battery Pack via the cigarette lighter socket of a vehicle.

How long will the Battery Pack run a CPAP machine? Run times vary depending upon several factors including device type, pressure settings and altitude. Average Battery Pack run times:
C-150: 15-20 Hours C-222: 25-30 Hours C-444: 50-55 Hours

NOTE: Use of a sine wave inverter, DC converter or a heated humidifier will significantly reduce the expected run time.

How long does it take to recharge the Battery Pack?

C-150: 4-5 Hours C-222: 5-6 Hours C-444: 6-7 Hours

Can the Battery Pack be recharged via the cigarette lighter socket of a vehicle? Yes. Battery Packs can be safely recharged via the cigarette lighter socket of a vehicle by using a sine wave inverter or DC converter in conjunction with the Battery Pack.

Can CPAP Battery Packs be used to power other devices? YES. Super CPAP Battery Packs can also be used to power other devices that operate from 12V DC current such as portable DVD players, iPods, laptops, iPads, cell phones, and more! (use of a sine wave inverter or DC converter may be required).
